

ChatGPT Control & Whisper Mode

Enhancing ChatGPT Voice Mode for young professionals through private "Whisper" input and real-time editable transcripts to reduce public friction and increase prompt precision.

Team: Product Team @ChatGPT

Contributors: Paridhi Talwar

Status: In Review

Launching on: 01//03/2026

Resources:

Milestone 1: [Digital Dhvani – Indian Voice Market Landscape](#)

Milestone 2: [User Research on ChatGPT Voice Mode Adoption](#)

1. Problem Definition

What is the problem?

Young professionals avoid ChatGPT Voice Mode because it lacks the granular editing control and privacy required for high-stakes career tasks. Users feel that voice input is "high-risk" due to the inability to review or "undo" transcripts before the AI responds, creating an "Efficiency Paradox."

Who is facing the problem?

The primary segment is the **60-80 million young professionals and active job seekers** in India (ages 20-35) who are already "embedded" in ChatGPT for daily workflows but are restricted to text-only interactions.

Business Value

Solving this unlocks a massive, high-intent Total Addressable Market (TAM) in India, increasing user stickiness and retention. It bridges the "Control Chasm," potentially converting "Rare" voice users into daily active users.

User Benefit

Users will be able to use voice confidently for complex tasks like resume drafting and mock interviews, even in public or shared spaces, without sacrificing precision or privacy.

Urgency

- **Market Timing:** India is a voice-first economy (**140 million** users), requiring a rapid move to secure the professional segment before competitors standardize silent interfaces.
 - **Bridging the "Control Chasm":** Users rated the need to "undo" or "rephrase" instantly at **4.6/5**.
 - **Addressing Feature Stagnation:** **70%** of the segment uses Voice Mode "Rarely" or "Never."
-

2. Goals & Metrics

Goals

- Bridge the "Control Chasm":** Implement a synchronous review layer allowing users to edit voice input before LLM processing.
- Enable Universal Accessibility:** Deploy "Whisper Mode" to bypass social and environmental barriers.
- Drive Voice-Native Habit Formation:** Transition Voice Mode to a weekly high-utility career tool.

Level	Metric Name	Target Goal	Why it Matters
North Star	Daily Active Voice Minutes (DAVM)	+30% MoM	Captures the ultimate value of "habit formation."
L0 (Business)	Voice Mode Adoption Rate	>15% of DAU	Validates if the mic icon moves from "hidden" to "primary."
L1 (Product)	Avg. Successful Turns per Session	>12 turns	Proves the "Control Chasm" is closing; deeper reasoning sessions.
L2 (Feature)	Correction Rate (Scratchpad)	>40%	Directly validates the demand for editing control (4.6/5).
L2 (Feature)	Whisper Mode Activation	20%	Measures success in overcoming the "environmental barrier."
Guardrail	P95 Latency	<1000ms	Prevents the "Latency Paradox" on 4G networks.
Guardrail	Interruption Rate (VAD)	<5%	Ensures new "Listening" logic is not frustrating.

Non-Goals

- Multilingual Expansion:** Focus remains on UI/UX for the existing model, not new LLM training for regional languages.
 - Hardware Integration:** We will use standard mobile microphone hardware.
-

3. Validation of the Problem & Target Audience

Problem Validation

User research confirms that "Lack of suitable environment" and "Can't review prompts" were cited as top blockers. The **140 million** Indian voice assistant users are not converting to ChatGPT Voice Mode due to this **Feature Stagnation**.

Target Audience

- **Segment:** Young Professionals & Job Seekers in India (Ages 20-35); ~60-80M users.
- **Unmet Needs:** Professional-grade privacy (Whisper) and the ability to improvise mid-prompt without starting over.

4. Solutions: The "Dhwani Pro" Interface

The "Dhwani Pro" Interface transitions ChatGPT Voice from a passive listener to an Active Draftboard.

A. GPT Whisper (Enhanced Privacy)

- **Core Capability:** Intelligent sound processing that adjusts acoustic focus to capture soft speech accurately while actively filtering urban background noise (traffic, metro).
- **User Value:** Enables "discreet ideation" for career planning in crowded, public environments (e.g., a Bengaluru bus).
- **Competitive Edge:** Optimizes **input sensitivity** for reliable high accuracy at the lowest speaking volumes.

B. The Live Scratchpad (User Control)

- **Core Capability:** Shifts to an "asynchronous voice drafting" model. The transcript streams immediately into a visible "Draft Zone" as the user speaks.
- **Intelligent Editing:** A lightweight software agent monitors for self-correction phrases ("Wait," "Actually," "Change"). The system then pauses the response timer, allowing real-time text edits before the final prompt is sent to the LLM.
- **User Value:** Provides the speed of voice with the precision and "safety net" of a text editor.

Workflow (Live Scratchpad)

Step	Action/Mechanism	Description/Details
1. Activate	User Taps	Taps the Advanced Voice Mode Icon ; Voice Input screen opens.
2. Input & Transcribe	User Speaks	System instantly transcribes speech into the Live Scratchpad .
3. Refinement	Speak Edits or Touch Edit	User corrects text via voice commands (e.g., "change that to...") or manual tap/edit.
4. Submit	Voice Command or Manual Tap	User says "Send." or taps the "Send" button.

Step	Action/Mechanism	Description/Details
5. Response	Processing & Output	Final prompt sent to LLM; LLM responds with both text and read-aloud voice .

5. Launch Readiness

Key Milestones

Milestone	Timeline	Goal
M1: Design	Week 1-2	Finish all app screens (Scratchpad, Popup) and voice scripts.
M2: Build	Week 3-4	Connect voice-to-text tech and set up the "Whisper" sound controls.
M3: Testing	Week 5	Team tests the app in loud places (buses/metros) to ensure functionality.
M4: Fixes	Week 6	Test on slow 4G networks and fix "Hinglish" language errors.

Milestone	Timeline	Goal
M5: Final Review	Week 7	Final check: Is it fast enough and accurate? Launch readiness.

Launch Checklist & Internal Stakeholders

- **Engineering:** Ensure smooth performance and stability under high user load.
- **Customer Support:** Publish simple guides (FAQs) on using "Voice Undo" and "Whisper Mode."
- **Legal/Privacy:** Ensure all voice recordings are encrypted and securely protected.
- **Product Marketing:** Roll out the "Career-First" message through in-app banners and social media.

Experimentation Plan (A/B Test)

- **Hypothesis:** Changing the hidden mic icon to a **main button** and adding a **space to see/edit your voice input** will increase the number of users who successfully complete a voice action by 25%.
 - **A/B Test Groups:**
 - **Group A (Current Version):** Existing design (Hidden icon, automatically sends voice).
 - **Group B (New Version):** New design (Visible main button, Whisper Toggle, Live Editable Scratchpad).
 - **Primary Metric: Voice Completion Rate (VCR)**—the percentage of users who successfully send a voice message without giving up.
-

6. Open Questions & Trade-offs

Decisions Taken

- **Asynchronous Scratchpad Processing:** Transcript streams in real-time, but LLM processing only starts when the user hits "Send," ensuring a smooth editing experience.

Open Questions

- **Battery Impact:** Could continuous "Live Streaming" negatively affect battery life on older devices?
 - *Next Step:* Engineering will conduct "Surge Condition" performance tests.

Trade-offs (Descoped)

- **Descope: Real-time Tone Analysis.**
 - *Trade-off:* Postponed "Tone/Pitch" analysis (interview coaching) to focus on establishing a robust and reliable core product foundation, prioritizing "Control" (Input Reliability) in the MVP.
